Domain : Data Science and Business Analytics

Start Date : 1/05/2023   **End Date** : 31/05/2023

Basic tasks:

1. Exploratory Data Analysis (EDA): Analyze a dataset and gain insights by creating visualizations and summary statistics.
2. Naive Bayes: Develop a program that can classify data based on the probability of an event occurring.

Intermediate tasks:

a) Natural Language Processing (NLP): Develop a program that can process and analyze text data using machine learning algorithms.
b) Deep Learning: Develop a program that can perform complex tasks like image recognition, natural language processing, and speech recognition using deep neural networks.

Criteria to receive certificate and lor:

1. Complete 1 basic task for receiving certificate
2. Complete 1 basic + 1 intermediate task for receiving certificate and lor
